Q4 2025 Fund Commentary

Commentary and opinions are provided by Mackenzie Investments.

Market commentary

The U.S. economy remained resilient in the fourth quarter despite significant disruptions from the record-long government shutdown and slowing job creation. Consumer spending and continued strength in AI-related business investment helped support overall activity.

The U.S. Federal Reserve Board delivered two additional 25-basis-point interest rate cuts in October and December, lowering the federal funds rate to 3.50%–3.75% as policymakers responded to softer labour-market conditions and elevated economic uncertainty. The unemployment rate was 4.4% in December as job gains moderated and labour-market momentum cooled.

The U.S. equity market advanced, with the S&P 500 Index rising 2.7% and reaching fresh record highs in December. Information technology and communication services remained influential, and health care outperformed as investors rotated toward stability amid slowing economic growth signals.

Performance

Stock selection in the financials, health care and consumer staples sectors contributed to the Fund's performance. From a factor perspective, the stock selection model contributed positively to performance, and the value and growth factors contributed to performance.

Overweight allocations to Micron Technology Inc., Dollar General Corp. and Lam Research Corp. contributed to the Fund's performance. Micron Technology delivered strong gains, supported by improving memory pricing trends and optimism around demand for AI-driven data center applications. Dollar General contributed as better-than-expected holiday sales and disciplined inventory management drove margin resilience, despite a challenging retail backdrop. Lam Research also contributed, benefiting from robust semiconductor equipment demand and positive outlooks tied to next-generation chip manufacturing and AI-related investments.

Stock selection in the information technology sector detracted from performance. From a factor perspective, the Quality factor detracted from performance.

Overweight allocations to Advanced Micro Devices Inc., Nutanix Inc. and Johnson & Johnson detracted from performance. Advanced Micro Devices declined during the quarter as investor sentiment softened on concerns around near-term demand for personal computer and gaming microchips, despite optimism for artificial intelligence (AI)-related growth over the longer term. Nutanix underperformed following mixed quarterly results and cautious earnings guidance, which raised questions about the pace of the company's subscription growth and margin improvement.

Portfolio activity

Portfolio activity during the quarter is an outcome of a disciplined process that is largely driven by stock selection, optimization and a vetting process that runs daily.

*For Partner series and Preferred partner series an advisory and management services (AMS) fee, of between 0.50% and 1.25%, is negotiated between you and your advisor. The MER doesn't include this fee.

Canada Life is currently waiving a portion of the investment management fees on the High Interest Savings fund to target an estimated management expense ratio of 1.00%. Canada Life is not obligated to continue waiving these fees and it may cease to do so at any time without notice.

The 7-day annualized yield is based on the annualized total return of the fund over the past seven calendar days and does not represent an actual one-year return. It's important to note that 7-day annualized yield is not an indicator of future performance of the fund.

[^]Deferred Sales Charge (DSC) purchase option is not available for new contributions given regulatory bans that came into effect June 1, 2023. For certain policies where DSC is the only sales charge option available, new contributions may be accepted. Additional disclosure may be required.

[†]Soft capped - Contributions are no longer accepted to new investors., [‡]Hard capped - Contributions are no longer accepted.
